

Toll Service Provider dealing with GDPR

10/2020

As EETS we are 100% GDPR compliant and 100% data dependent:

- Our business is data.
- We transform the toll data coming from toll chargers into invoiced for our customers including all the relevant details about who (license plate) drove where and when (trips reporting) .
- In some countries, we even have geolocation points.
- eurotoll acts as Data Controller.

Our clients want us to use their data:

- They require “smart” reporting.
- They want alerts on their consumptions.

We are keen to use their data too:

- Telematics services are possible on top of toll collection systems when GNSS is active.
- ...

Archive and data retention period:

- Legal requirements
- Commercial needs
- GDPR principles

Privacy by design / Privacy by default

- For new tools
- For new developments

Thanks for your attention
