

## IBTTA Supports Member Toll Operators in a Request for Information (RFI) for Digital Payment Gateway Solutions

The Pennsylvania Turnpike Commission (PTC) is issuing and administering this Request for Information (RFI) on behalf of 18 toll operators as an opportunity for respondents to provide feedback, information, and materials regarding trends and options for digital payment gateway solutions. A digital payment gateway is **the mechanism that securely reads and transfers payment information from a customer to a merchant's bank account**. Its job is to capture the data, ensure funds are available, confirm customer consent exists and pay a merchant. A payment gateway solution will integrate with a toll agency's back-office system and have Application Programming Interfaces (API) that are published and available to secure public and private partners. A digital payment gateway is omnichannel and can service multiple payment service providers, accepts multiple currencies, avoids duplicative payments, and uses financial services standards to post and settle payments. The digital payment gateway should accept multiple payment types including card and non-card payments.

The Request for Information has been advertised on the PTC Vendor Portal and eMarketplace and can be viewed and responded to at: <https://www.ptcvendorportal.com>.

RFI #6100009413 Digital Payment Gateway for Toll Agencies – Submissions are due on 11/29/2022

### IMPORTANT NOTES:

- To ask questions or submit a proposal in response to this RFI you must be registered in the PTC's Vendor Portal.
- When submitting a proposal please allow plenty of time to upload documents completing your submission before the deadline. The Vendor Portal will not allow uploads and submissions past the deadline.
